MOI

THE CAMPFIRE CHAT · SEPTEMBER 2026

Community Call #14

Ideas. Updates. Community. Conversations.

PROTOCOL

The September release

moipod v0.13.0, live on the Voyage devnet on 11 September.

NEW CAPABILITY

Fee delegation

- An interaction can name another account to pay its fuel
- Your app holds one funded account and names it as payer
- The payer signs each one, covers fuel only, and leaves no open tab
- So a new user, or an agent, can start with zero KMOI

BREAKING

KMOI is capped

- It moved to MASN, the standard reserved for the fuel token
- Nobody can mint or burn it, not even the asset manager
- New asset id, so import `KMOI_ASSET_ID`

BREAKING

Prices in anu

- One KMOI is a billion anu, and the network counts in whole anu
- Fuel starts at 50 anu; storage is a million anu per byte
- Convert with `parseKmoi`, never by hand

ACTION REQUIRED

Upgrading from August

Install all three together. Older SDK builds know neither the new KMOI id nor the fee payer.
`npm i js-moi-sdk@0.9.0-rc2 js-polo@0.1.5` · node: moipod v0.13.0

NUMBERS THAT MOVED

Ids, storage, fuel

- Hardcoded KMOI ids become `KMOI_ASSET_ID`; search for `0x108000004cd973c4`
- Fixed storage amounts are a millionth of what they should be, so rewrite them with `parseKmoi`
- Fuel below 50 anu is refused, so leave `fuel_price` unset

ANYTHING BUILT BY HAND

Lists and assets

- Participant lists drop the sender and the fee payer, because the node reads both
- Keep the fee payer listed only as a notary, when it signs the operations
- Assets with a max supply of zero, or over 18 decimals, are refused

DEVELOPER RELATIONS

Meeting agents where they are.

IN PROGRESS

MOI MCP server

Agents transact on MOI through MOI Wallet and WalletConnect. The server holds no keys.

INTEGRATION

MOI and x402

Wiring MOI into the x402 payment flow, where on-chain identity meets HTTP 402.

CONTENT

The MOI blog

Protocol write-ups built to be found and cited, which is the same work the visibility numbers ask for.

AI VISIBILITY

How AI answers for us.

47 queries, tracked across 5 AI engines. This is the baseline we measure every month from here.

VISIBILITY

17.3%

How often MOI shows up in the answers to those 47 queries.

CITATIONS

1,203

Times our pages were cited as a source inside those answers, and still climbing.

MENTIONS

650

Times MOI was named in an answer, cited or not.

AI VISIBILITY · BY ENGINE

Where we show up

The number that matters is not the average. It is how consistently MOI appears across different systems.

perplexity

20%

PERPLEXITY

19.1%

GEMINI

19%

COPILOT

12.8%

CHATGPT

Gemini moved the most, up 12.8 points, while ChatGPT slipped 4.3. Coverage of the tracked set is strong: **221 of 226 responses**, or 97.8%, so Claude is the room left to grow.

What people ask AI about MOI

THE STRONGEST TRACKED QUERIES

Mostly first questions

- What is MOI Network?
- Is MOI a blockchain?
- What is the MOI Agent Launchpad?
- Is MOI compatible with other chains?
- How MOI Technology is perceived by visitors

WHAT THAT TELLS US

They are working out what MOI is

People want to know what it is, how it works, and what they can build with it. Nobody is asking about the parts we discuss internally. The answers they get are written by whatever we have published, which makes this a content problem more than a product one.

WHAT WE DO ABOUT IT

Write for the questions already being asked

CORE EDUCATION

What MOI is

- What is MOI, and what is MOI Network
- Is MOI a blockchain
- How MOI works, and what makes it different

PRODUCT LED

What you can build

- What the Agent Launchpad is, and how to create an agent
- Agent examples, SDK and developer guides
- Ecosystem integrations

COMPARISON

How we sit next to others

- MOI versus Lit Protocol
- MOI versus other agent and infrastructure protocols
- Interoperability and compatibility

COMMUNITY

Game Nights are doing the work

SINCE THE LAST CALL

120+ new Discord joins

- 60+ active members overall
- Game Nights are the biggest single contributor
- Members are joining from several regions

GAME NIGHT, SEVENTH RUN

Participation doubled

- 42 people at peak, up from 20 last time
- Gartic was the format, played last Friday
- Poker next, run with another community

PIP, OUR AI BOT

Live in Discord

- Ask it about MOI and the ecosystem
- Check your rank on the server
- Discord becomes something you use, not just read

Interactive formats are pulling more weight than content alone. That is the lesson we are acting on.

EVENTS

We were at Futuremode, Taipei.

4 to 6 September, at the Taipei Expo Dome. A festival built around the convergence of AI, blockchain and emerging systems. We joined the Building AI-Native Crypto Products panel, and the people we met there are the ones we are now bringing onto these calls.

WHAT IS NEXT

On the horizon

AI VISIBILITY

Raise the baseline

- Hold the Gemini gain, and improve coverage on Claude
- Authoritative pages for the questions people already ask
- Documentation an AI system can read and cite
- Turn ecosystem projects and integrations into searchable content
- Track the same 47 queries every month

COMMUNITY AND CAMPAIGNS

Turn reach into activity

- Verify the campaign click-through and its attribution
- The next Game Night, run with another community
- Pip adoption inside Discord
- Short-form content from the Humanised podcast
- A discussion about bringing the University of Hong Kong onto MOI

Thanks for building in public.

`fee delegation is live`	your app can pay the fuel for a user who holds no KMOI
`npm i js-moi-sdk@0.9.0-rc2`	older builds know neither the new KMOI id nor the payer
`17.3% AI visibility`	the baseline we measure against every month from now
`120+ new members`	Game Nights are bringing them in, so we are doing more

Open Q&A. The floor is yours.
