WELCOME

MOI Community Call #8

Agentic Economy Boom

DEV UPDATE

CoCo Language Updates

CoCo v0.8.1

Bug fixes and stability improvements. Binaries ready, docs PR pending merge.

CoCo Skills (NEW)

A 13-file structured language reference that teaches AI coding assistants (like Claude Code) to write valid Coco smart contracts. Covers types, state management, endpoints, classes, collections, control flow, interfaces, assets, builtins, testing, and the Cocolab REPL. Drop the zip into any Coco project → AI goes from broken pseudocode to compilable logic.

DEV UPDATES

VS Code Extension v0.3.0 (Major)

Upgraded from syntax-highlighting-only to a full Language Server (LSP):

Go to Definition

(Cmd+Click) for classes, fields, methods, interfaces, events, locals — across multi-file modules

Semantic highlighting

distinguishing variables, parameters, function calls, types, properties

Real-time error diagnostics

inline: undefined variables, invalid field access, type-checked arguments, state field validation, f-string expression validation

Validated against 130+ Coco test files.
Live now on the VS Code Marketplace

DEV UPDATES

SDK & Infrastructure

JS-MOI SDK v0.7.0-rc10

Bug fixes and stability improvements

go-moi v0.11.0

Performance improvements for KBFT

moi-wallet

Beta testing in progress

Docs Overhaul

Complete rewrite for both CoCo docs and MOI docs

AGENTIC ECONOMY

Projected Growth

The consensus growth rate lands around 26–36% CAGR depending on the source:

Statista projects the market will reach $827 billion by 2030

Cargoson

Grand View Research forecasts $3.5 trillion by 2033 at a 30.6% CAGR

Grand View Research

Statista Market Insights estimates a fourfold increase to over $1.2 trillion by 2030

Statista

THE PROBLEM

You Are the Digital Safety Layer Today.

You log in. You review. You approve. You click confirm.

Every time an AI agent drafts an email,	you read it before sending.
Every time a transaction fires,	you check the amount.
Every time an agent suggests an action,	you decide yes or no.

That's not a feature. That's you being the governance infrastructure. You are the WHO.

THE PROBLEM

When You Leave the Loop

Agents are going autonomous. But WHO has no independent existence in computation.

Your Identity	Your Wallet	Your Profile
lives inside the app.	lives inside the contract.	lives inside the platform.

When the human leaves the loop, there is nothing left in the machine to represent them.

No independent WHO. No scoped authority attached to a persistent participant.

No boundary that survives without you clicking "approve."

WHO had no independent existence in computation.

THE PROBLEM — THREE DOMAINS, ONE ROOT CAUSE

What Happens When WHO Is Missing

AGENT SAFETY

11

Failure Modes

"Agents of Chaos" (Harvard, Northeastern, CMU, 2026): Autonomous agents destroyed servers, leaked SSNs, complied with attackers.

Two weeks. Zero governance.

arxiv:2602.20021

VALUE SAFETY

$2.8B

Lost

Bridge exploits: Ronin ($625M), Wormhole ($320M), Nomad ($190M).

Tokens in shared contracts. One vulnerability — everyone loses. No participant-owned state.

On-chain records

SOFTWARE SAFETY

$285B

Wiped

The SaaSpocalypse. Features commoditized overnight. A 5-person feature now ships in a day.

No moat left except participant context — and no infrastructure for it.

Morgan Stanley, 2026

THE PROBLEM — ANALYTICS-ERA ANSWERS TO AN AGENTIC-ERA PROBLEM

The Industry's Answer

Analytics-era answers to an agentic-era problem.

Memory Layers Stateless	Mem0, Zep, MCP — cached recall. Stateless. App-anchored. If the vendor shuts down, the memory is gone.
Star Ratings Not Governance	A market tip, not governance. A 5-star rating on an agent tells you popularity, not safety.
Guardrails Not Durable	Rules bolted onto the model. The model can be jailbroken. The guardrails go with it.
API Keys Copyable	Copyable. An API key is information. Trust is value. You can't copy trust.
OAuth / Identity WHO still inside HOW.	App-anchored. Your identity lives in their system. WHO still inside HOW.

Proof is retrospective. Authority is prospective. The agentic era needs governance, not audit.

THE SOLUTION

What's Actually Needed

The agent logs into you. Not you into the agent's platform.

State

Persistent, participant-owned, linearly evolving.

Not **cached**. Not just **replicated**.

Today: your medical record updates at the hospital. Your insurance agent still sees last month's version.

Authority

Scoped mandates, delegation chains, real-time revocation.

Not **preferences** in a vector database.

Today: your AI assistant books a $600 flight. Was it authorized? By whom? Until when?

Existence

The participant as an independent computational primitive.

Not just an **Identity**.

Not a **row in a database.**

Today: You delete your Mem0 account — your memory is gone. You don't exist independently; you exist as a row in their database.

This is not a feature. This is infrastructure.

WHO had no independent existence in computation.

We fixed that.

Introducing WHO as a first-class dimension of computation alongside WHAT, WHERE, and HOW.

THE TECHNOLOGY

Contextual Compute

Participant-indexed computation — the general theory of computation

Classical Compute (WHO = 0)

Anonymous global state. Copyable.

Context-free. Every system today.

Contextual Compute (WHO > 0)

Participant-indexed state. Linear.

Participant-bound. Value computation.

$$\delta(S, I) \rightarrow (S', O)$$

$$\psi(P, C, I) \rightarrow (P, C', V)$$

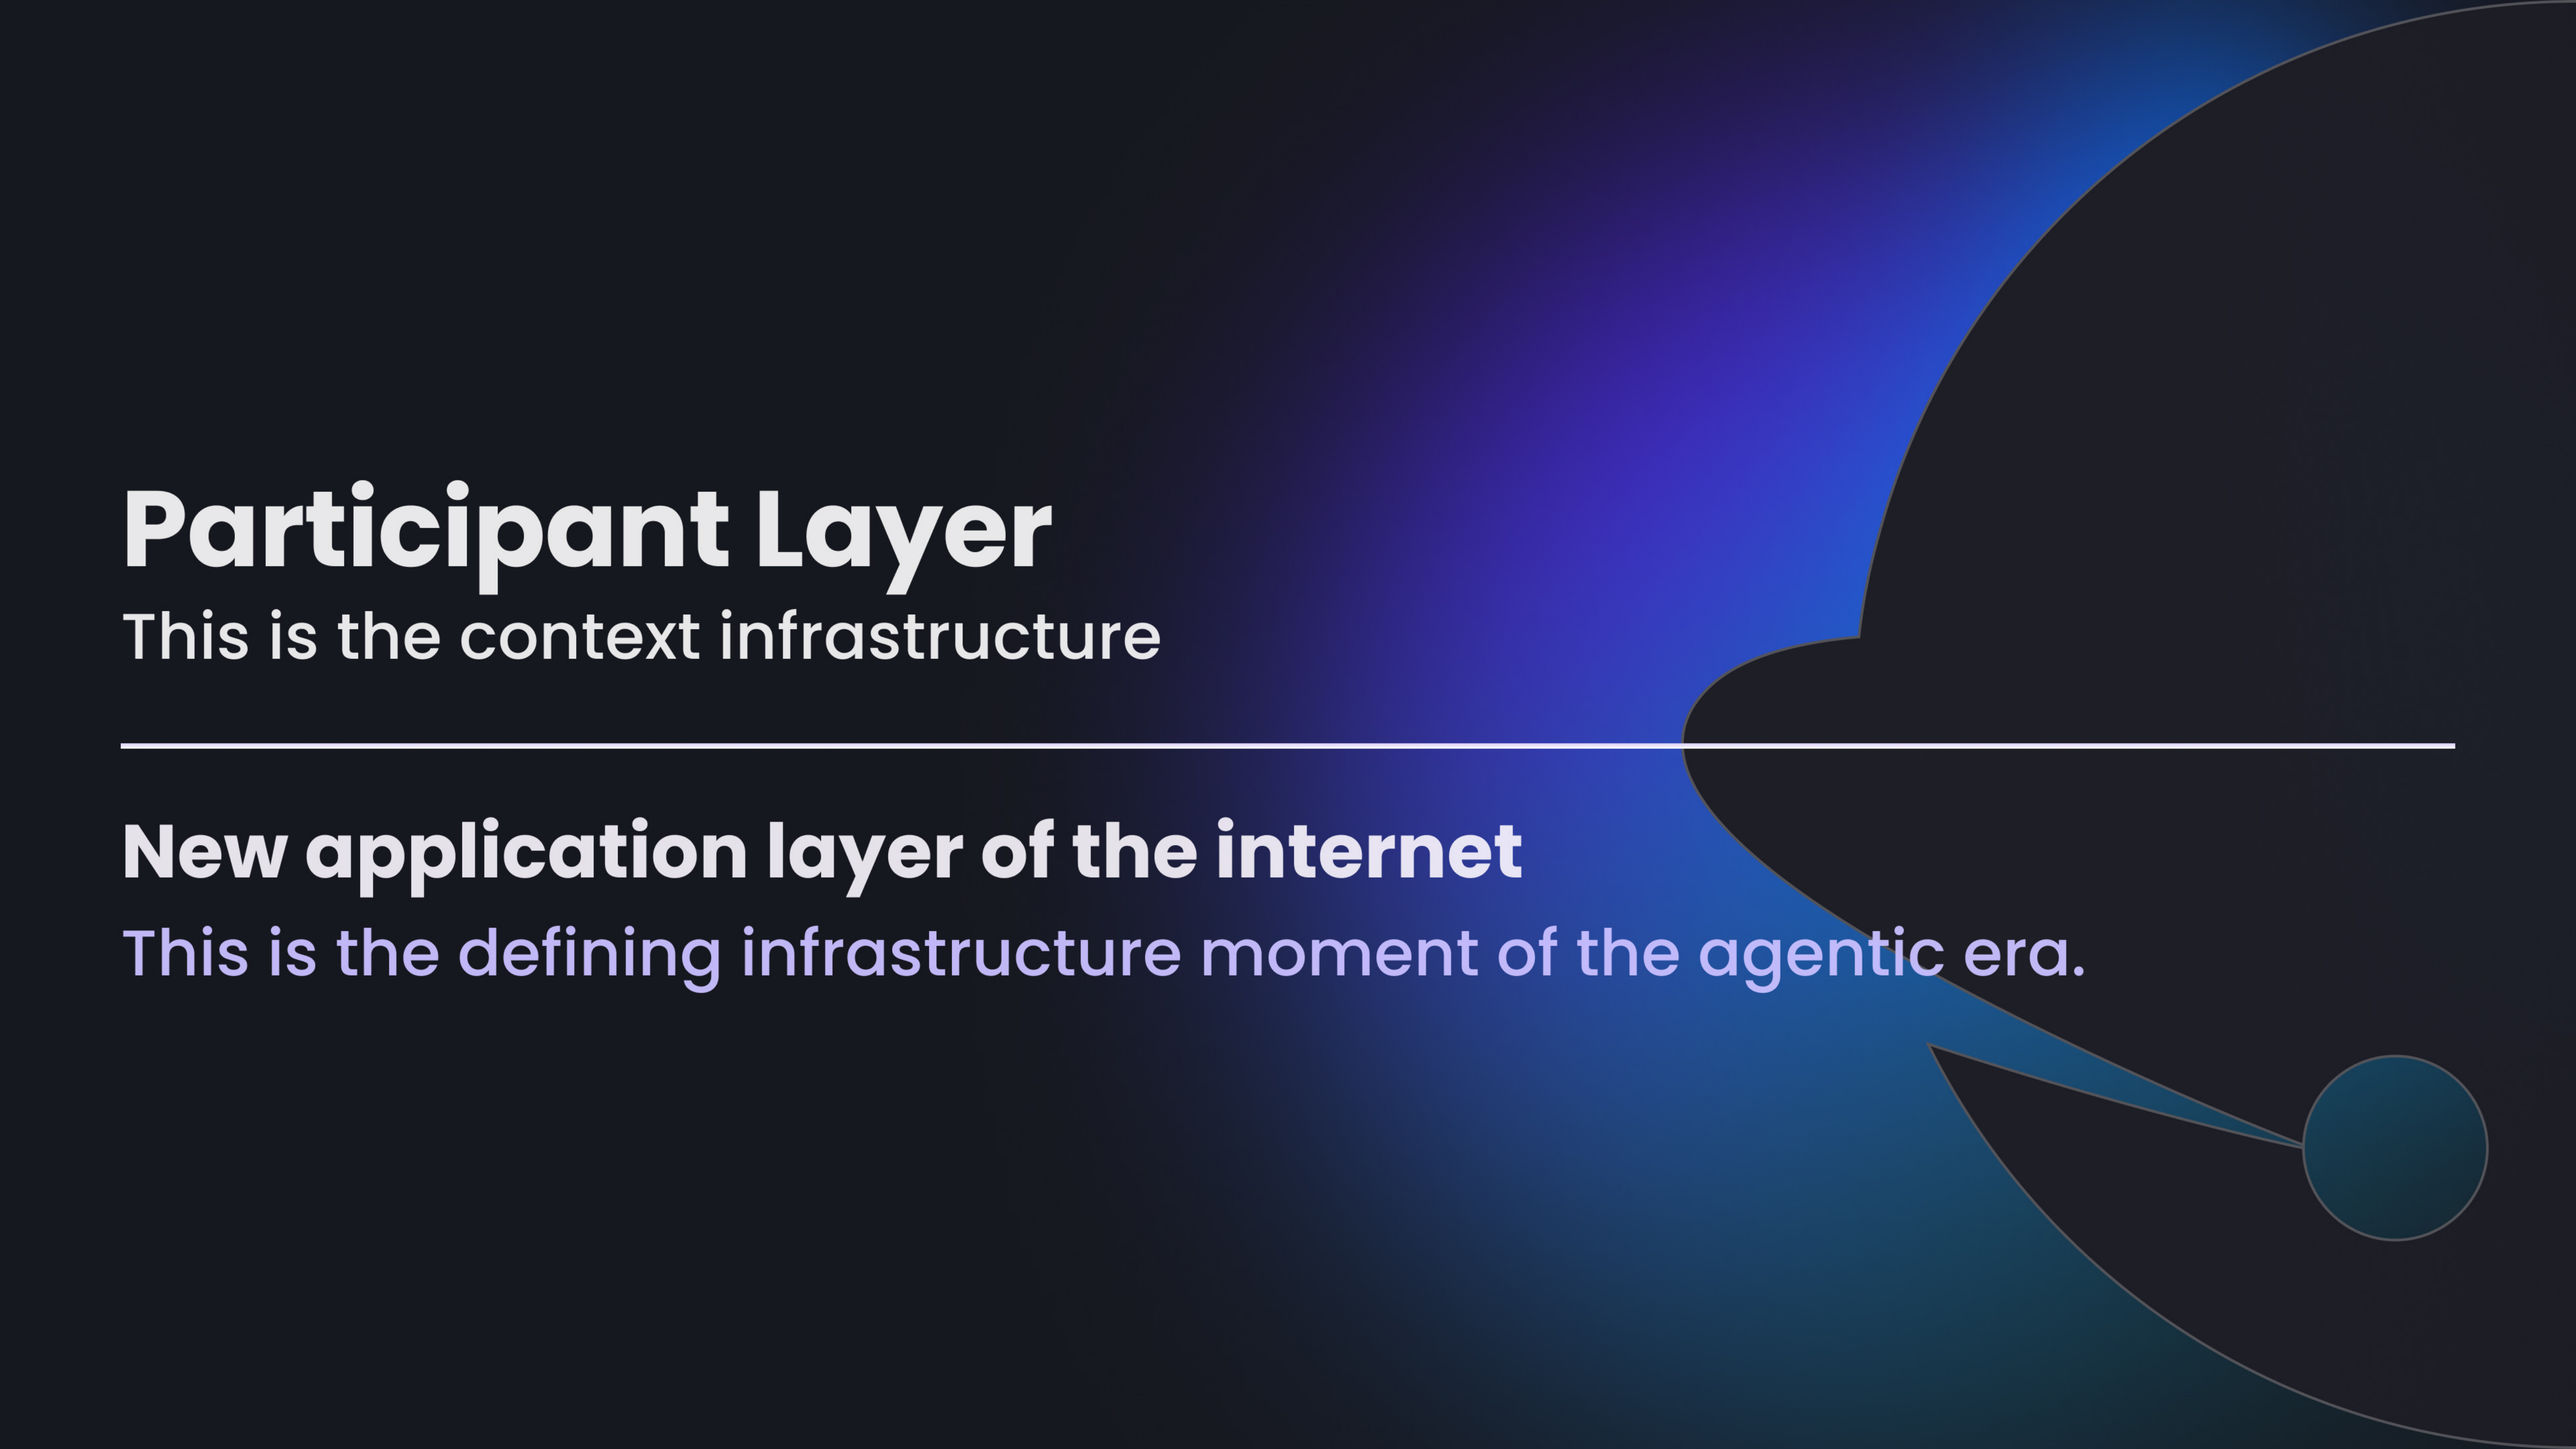

Paradigm	Infrastructure	Implementation
Relational Model	SQL Databases	Oracle
Actor Model	Erlang Runtime	WhatsApp
Smart Contracts	Ethereum VM	Ethereum
Contextual Compute	**Participant Layer**	**MOI**

Participant Layer

This is the context infrastructure

New application layer of the internet

This is the defining infrastructure moment of the agentic era.

COMMUNITY

MOI Game Nights

Game Night #3 just wrapped - and the energy was 🔥

Highlights

32	**3**	**1**
Discord Joins	Interactive Rounds	Full Hour of engagement and fun

COMMUNITY

Humanized Podcast Updates

- We’ve pushed 6–7 new short-form clips across platforms, driving strong traction.
- YouTube is growing with new subscribers
- Retention is solid (~40%), with most viewers being new to MOI.
- Episode 2 goes live next week, with a more builder-focused approach.

Podcast Performance & Growth

12	25k+	27+
Total Clips	Views	Hours of watchtime

COMMUNITY

MOI Nation

This platform will act as a central hub for onboarding and engaging users across all our initiatives — including MOI Game Nights, Campus Roadshows, and MOI Forge.

Gamified Progression System

Users will earn XP for every action, level up over time, and track their progress as they explore the ecosystem.

Wallet & Testnet Integration

Seamless integration with MOI/IOME wallets, along with a built-in faucet so users can easily get started with testnet interactions.

Interactive Quest Engine

A mix of engaging tasks, including: Social missions, Brain teasers and quizzes on MOI concepts, Crypto puzzles and Real on-chain interactions

Digital Collectibles

Users can unlock unique collectibles and mementos as they progress through different campaigns.

The goal is simple: drive consistent, meaningful on-chain engagement.
More details coming soon — stay tuned!
